

AMENDMENT TO THE CLAIMS

Please **AMEND** claims 14 and 19; and

Please **ADD** new claims 31-43 as follows.

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-13. (Canceled)

14. (Original) A semiconductor device, comprising:

a substrate;

a source and a drain arranged within the substrate;

a gate formed on the substrate between the source and drain; and

a substrate contact formed within the substrate in electrical contact with the

source,

wherein little or no current flows through the substrate contact.

15. (Original) The semiconductor device of claim 14, further comprising the substrate contact being configured to shield the semiconductor device from electrical noise.

16. (Original) The semiconductor device of claim 14, further comprising the substrate contact being in direct physical contact with the source of the semiconductor device.

17. (Original) The semiconductor device of claim 14, wherein the substrate contact comprises a p+ region.

18. (Original) The semiconductor device of claim 14, wherein the source comprises a source finger and the substrate contact abuts substantially all of one side of the source finger.

19. (Currently Amended) The semiconductor device of claim ~~[[18]]~~ 14, wherein the source comprises ~~comprising~~ at least two source fingers arranged within the substrate, wherein the substrate contact abuts two of the at least two source fingers.

20. (Original) The semiconductor device of claim 14, wherein the substrate contact comprises a p-type doped silicon tab contacting the source and a silicide layer arranged on top of the substrate contact.

Claims 21-30. (canceled)

31. (New) The semiconductor device of claim 14, wherein the substrate contact at least one of:

- completely encircles an active region;
- almost completely encircles an active region;
- encircles three-quarters of an active region; and
- encircles half of an active region.

32. (New) The semiconductor device of claim 14, wherein the semiconductor device comprises an FET prime cell.

33. (New) A semiconductor device, comprising:

- a substrate;
- a source and a drain arranged within the substrate;
- a gate formed on the substrate between the source and the drain; and

a ring substrate contact formed within the substrate in electrical contact with the source.

34. (New) The semiconductor device of claim 33, wherein the ring substrate contact is configured to shield the semiconductor device from electrical noise.

35. (New) The semiconductor device of claim 33, wherein the ring substrate contact is in direct physical contact with the source of the semiconductor device.

36. (New) The semiconductor device of claim 33, wherein the ring substrate contact comprises a p+ region.

37. (New) The semiconductor device of claim 33, wherein the source comprises a source finger and the ring substrate contact abuts substantially all of one side of the source finger.

38. (New) The semiconductor device of claim 33, wherein the source comprises at least two source fingers arranged within the substrate, wherein the ring substrate contact abuts two of the at least two source fingers.

39. (New) The semiconductor device of claim 33, wherein the ring substrate contact comprises a p-type doped silicon tab contacting the source and further comprising a silicide layer arranged on top of the ring substrate contact.

40. (New) The semiconductor device of claim 33, wherein the semiconductor device comprises an FET prime cell.

41. (New) The semiconductor device of claim 33, wherein the ring substrate contact at least one of:

- completely encircles an active region;
- almost completely encircles an active region;
- encircles three-quarters of an active region; and
- encircles half of an active region.

42. (New) A semiconductor device, comprising:

- a substrate;
- a source and a drain arranged within the substrate;
- a gate formed on the substrate between the source and the drain; and
- a substrate contact formed within the substrate in electrical contact with the source, the substrate contact at least one of:
 - completely encircling an active region;
 - almost completely encircling an active region;
 - encircling three-quarters of an active region; and
 - encircling half of an active region.

43. (New) The semiconductor device of claim 42, wherein the semiconductor device comprises an FET prime cell.
